

## *New generations. New faces of multiethnic Italy*

The exhibition is conceived as a journey into changing Italy.

School is the place where the change in progress is more evident: foreign students are 815.000, 9 % of the total.

The exhibition offers a gallery of characters moving in the world of work, professions, sport, music and art. They all come to terms with the traditions of the families and lands they come from, and at the same time are measured with the culture, values, life styles of what they feel as "their" country.

They are a meeting point between different worlds, often very far away.

They are the builders of an "enriched identity", open to meeting with the other and in constant evolution.

The new generations are a reality that leads us to consider multi-ethnic Italy as a resource that can enrich the society, and at the same time represent a challenge with which measure.
